	SI-1236 Trzin, Slovenia		
Trade Mark:	Metra System		
Model/Type ref.:	Metra Access Control Tickets		
Product Code:	ELSCWBXX; SCXX		

Various colour and graphic personalization options.

1   PRODUCT DESCRIPTION

Tickets are an integral part of Metra systems. They form a connection between customers and the facility and have a vital impact on the convenience, cost and efficiency of system usage. We have been listening to customer needs for over two decades now, and we came up with a range of tickets that we believe will suit almost any requirements.

Metra offers field proven, Metra's own designed and patented tickets. Basically Metra tickets are composed from the body that forms their shape and RFID data carrier which interacts with the system.

Metra designed tickets have the possibility to be retained when guests exit the facility. For this purpose the access control devices must be equipped with the Metra Wristband Capturer.

2   KEY FEATURES

- Several Metra patented designs for special needs
- Over a decade of experience, proven design
- A range of graphic personalization possibilities
- Ticket retaining drastically cuts operating costs

3   TICKET RETAINING

Ticket retain feature allows re-using of various tickets. For that innovative feature Metra has developed patented in 1998 contact-less "Wristband Capturer" (WBC) together with contactless RFID Wristband. The "Wristband Capturer" grants the exit signal only when the ticket is successfully erased and retained. This dramatically cuts costs of the system operation and the chance of fraud. A ticket will be retained under following conditions:

- Retain request written on it/assigned to it
- It is presented to the retaining device
